TauOS Developer Guide

Getting Started

Welcome to TauOS development! This guide will help you get started with building applications for the TauOS ecosystem. Prerequisites: • Node.js 18+ and npm • Git for version control • Basic knowledge of React and TypeScript • Understanding of privacy-first development principles

Development Environment Setup

1. Clone the TauOS repository 2. Install dependencies: npm install 3. Set up environment variables 4. Run the development server: npm run dev 5. Access the application at <http://localhost:3000>

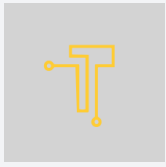

API Documentation

TauOS provides a comprehensive API for all core services: Authentication APIs: • POST /api/auth/login - User login • POST /api/auth/register - User registration • POST /api/auth/logout - User logout Application APIs: • GET /api/taumail/* - Email service APIs • GET /api/tauccloud/* - Cloud storage APIs • GET /api/tauid/* - Identity management APIs • GET /api/taustore/* - App marketplace APIs • GET /api/taubrowser/* - Browser service APIs • GET /api/tauai/* - AI assistant APIs

Privacy-First Development

TauOS is built on privacy-first principles: • All data processing happens locally when possible • No user data is collected without explicit consent • All communications are encrypted end-to-end • Open source code for transparency • Regular security audits and updates

Contributing Guidelines

AR Holdings Group Corporation

Tau Foundation / Tau LLC

2126 Market Street, San Francisco, CA 94114, USA

We welcome contributions to TauOS! Please follow these guidelines: 1. Fork the repository 2. Create a feature branch 3. Write tests for new functionality 4. Ensure all tests pass 5. Submit a pull request with a clear description 6. Follow the code style guidelines
